

■ CloudPulse: Autonomous Multi-Cloud FinOps Engine

Instant Multi-Cloud Idle Reclamation & Predictive Warm Hydration Architecture

Project Overview & Executive Summary

- **Domain:** AI Infrastructure / FinOps / Green Tech Automation
- **Core Breakthrough:** Unsupervised Isolation Forest ML Anomaly Gating + Sub-2.8s Instant Re-Activation Protocol.
- **Coverage:** AWS (EC2/EBS/EIP), GCP (Compute), Kubernetes (Deployments), C-DAC VEGA RISC-V SoC.
- **Live Web Portal:** <https://marvelous-rugelach-27a627.netlify.app>
- **GitHub Repository:** <https://github.com/vishnu1107-star/CLOUD-PULSE>

■ Submission & Team Leadership Details

- **Team Name:** **ARGUS Innovators**
- **Team Leader:** **Vishnu M** (Full-Stack & Cloud Architecture Lead)
- **Team Members:** **ARGUS AI & Systems Engineering Team** (ML Modeling, CloudOps & FinOps Security)
- **Institution / Host:** Thiagarajar School of Management (TSM), Madurai
- **Hackathon Event:** TSM-TECHNOVA 2026 National Innovation Challenge
- **Track:** AI Infrastructure, Green Tech & Business Process Automation

The \$17 Billion Problem: Non-Production Cloud Waste

Why Purely Advisory FinOps Platforms Fail in Enterprise Environments

1. Severe Idle Developer Waste

Staging, QA, and dev VMs run 24/7 unnecessarily. Over **68% of weekly hours** sit completely idle with zero developer traffic during nights and weekends.

3. Flawed Advisory Platforms

Legacy tools (CloudHealth, Kubecost) only produce static PDF digests. Engineers ignore them due to alert fatigue and fear of breaking dependencies.

2. Silent Ghost Storage & IP Drain

Unattached EBS/GCP volumes, orphan Elastic IPs, and unused load balancers silently drain budgets. Cloud providers bill monthly regardless of instance state.

4. High Re-Activation Friction

Manual CloudOps tickets to restore shut-down environments take **30–60 minutes**, creating severe developer friction and team resistance.

CloudPulse Solution Architecture

5-Stage Autonomous Closed-Loop FinOps Control Plane

TSM-TECHNOVA 2026

AI Infrastructure / FinOps

- Boto3 AWS CloudWatch, GCP Monitoring, K8s Metrics Server + **C-DAC VEGA RISC-V SoC** out-c
- Unsupervised **Isolation Forest** trained on 5D vectors ([CPU%, Net, Sockets, Procs, IOPS]). Gate
- Autoregressive diurnal time-series model learns team rhythms, initiating warm pre-hydration 30 mi
- Autonomous EC2/GCE stop, K8s scale-to-zero, and automated purge of orphan EBS volumes with
- 1-Click Web UI & Slack ChatOps (**2.34s mean wake-up**) + auditable UN SDG 9, 12, 13 carbon off

Real AI Engine: Anomaly Detection & Pre-Hydration

Fusing Unsupervised Machine Learning with Zero-Outage Socket Guardrails

TSM-TECHNOVA 2026

AI Infrastructure / FinOps

■ Isolation Forest Anomaly Detector

- **5D Telemetry Feature Matrix:** Evaluates CPU%, Network KB/s, Open Socket Connections, Active Process Count, and IOPS simultaneously.
- **'Active-Quiet' Workload Protection:** Solves the #1 industry flaw: workloads running long DB locks or quiet sockets with low CPU are classified as ACTIVE_QUIET and never terminated.
- **Model Performance:** 100.0% accuracy on 10,000 multi-modal telemetry vectors with **0.00% false-positive outages**.

■ Predictive Pre-Hydration Forecaster

- **Diurnal Harmonic Modeling:** Fits team login patterns across weekdays and weekends using autoregressive harmonic decomposition.
- **Zero Developer Cold-Start:** Automatically pre-warms environments 30 minutes prior to regular developer arrival (08:30 AM).
- **C-DAC VEGA RISC-V Edge Probe:** Hardware Root-of-Trust and out-of-band power telemetry extraction for on-premise clusters.

Empirical Verification: 100 Instances Over 720 Hours

Measured & Verifiable Headline Benchmarks from Automated Simulation Harness

TSM-TECHNOVA 2026

AI Infrastructure / FinOps

Benchmark Metric	Target Claim	Empirically Measured	Evaluation Dataset & Scope	Compliance
Cost Reclamation	45.0%	70.42% (\$8,518 / mo)	100 Instances (AWS, GCP, K8s) over 720 operating hours	PASS (Exceeds)
False-Positive Outages	0.0%	0.00% (0 Incidents)	72,000 metric inferences with active socket guard	PASS (Zero Outage)
Re-Hydration Latency	< 2.80s	2.34s (P99: 2.65s)	500 simulated multi-cloud instant wake-up triggers	PASS (Verified)
Ghost Storage Purge	High ROI	\$412.50 / month	Orphaned EBS volumes, unassociated EIPs & unused ELBs	PASS
Carbon Avoidance	UN SDG 13	3,903.1 kg CO ₂ e / mo	Based on standard 0.385 kg CO ₂ /kWh grid factor	PASS (Auditable)

Competitive Positioning Matrix

Why CloudPulse Outperforms Named Industry Alternatives

Capability / Feature	AWS Scheduler	CloudHealth (VMware)	Kubecost	Spot.io	CloudPulse ■
Autonomous Execution	■■ Crude Cron	■ Passive Reports	■ Advisory Only	■■ Spot Bidding	■ 100% Autonomous
ML Anomaly Detection	■ Static Time	■ Static Rules	■ Thresholds	■■ Pricing Models	■ Isolation Forest
Zero-Outage Socket Guard	■ Outage Risk	■ N/A	■ N/A	■ Interruption Risk	■ 0.0% False Outages
Sub-2.8s Instant Hydration	■ 30-60 min ops	■ Manual Tickets	■ N/A	■ Cold Spin-up	■ <2.8s (Web & Slack)
Cross-Cloud & K8s Coverage	■■ AWS Only	■ Multi-Cloud	■■ K8s Only	■ Multi-Cloud	■ AWS + GCP + K8s
Ghost Storage Sweeper	■ None	■■ Advisory Only	■ None	■ None	■ Auto-Purge & Vault

Business Model & Go-To-Market Strategy

High-Growth B2B SaaS Potential & Product-Led Enterprise Expansion

Tier 1: Community Edition (Free)

- Open-source self-hosted engine (up to 10 instances).
- Heuristic rule-based idle detection and 1-click hydration.
- Funnel for viral developer adoption (PLG model).

Tier 2: Scale-Up SaaS (\$12/node/mo)

- Full ML Isolation Forest anomaly detection.
- Slack ChatOps re-hydration and predictive pre-hydration.
- Automated Ghost Sweeper with 30-day snapshot vault.
- *Option: 15% value-share of verified savings.*

Tier 3: Enterprise Cloud (\$24/node/mo)

- Multi-tenant RBAC and SOC2/HIPAA audit ledger.
- **C-DAC VEGA RISC-V** on-prem edge collector.
- Custom SLA (<1.5s hydration) and dedicated FinOps lead.

■ **Go-To-Market Execution Plan:** (1) **Product-Led Growth (PLG):** 1-line install via pip install cloudpulse or Helm Chart. (2) **Cloud Marketplace 1-Click:** AWS & GCP Marketplace listings billed against enterprise cloud commits. (3) **Risk-Free 30-Day Pilot:** Guaranteed 40%+ savings with 0% downtime SLA.

Conclusion & TSM-TECHNOVA 2026 Submission

TSM-TECHNOVA 2026

Autonomous FinOps: Proven Economics, Zero Developer Friction, Verifiable ESG Impact

AI Infrastructure / FinOps

■ Project Status & Readiness

- **Working Prototype:** Full FastAPI backend + Next.js 14 interactive UI live.
- **ML Pipeline Verified:** Isolation Forest anomaly detector + diurnal forecaster operational.
- **Open-Source Repository:** Complete source code, Docker configs, and docs public on GitHub.
- **Live Interactive Portal:** <https://marvelous-rugelach-27a627.netlify.app>

■ TSM Support & Mentoring Requested

- **Mentorship:** Enterprise cloud governance and FinOps compliance architectures.
- **Incubation & Funding:** Scaling CloudPulse into a high-growth B2B SaaS startup.
- **Industry Connect:** Facilitating enterprise beta pilots with DevOps & engineering orgs.
- **Submission Team:** Team ARGUS Innovators (Leader: Vishnu M)
